

Sujatha Mayadunnage

Western Sydney University-Doctor of Philosophy Student

I had been working as a Biologist/Ecologist in Road Development Authority of Sri Lanka for more than 10 years where I had opportunity to involve in few animal-vehicle collision mitigation projects.

Now it is time to apply my knowledge and experience to mitigate Wombat vehicle Collisions which is a major wildlife threat happening in Australia.

My PhD research focuses on identification patterns of wombat road kills using WomSAT as a tool and also to reduce wombat vehicle collisions by applying few low cost site-specific mitigation measures.

I would say, The National Mange Hub Symposium was a great opportunity for me to meet wildlife carers and I appreciate the support I am receiving from them for planning my research.
